

AgentPay Guard

Policy and evidence before autonomous USDC spend

A deterministic control plane that evaluates an agent payment intent, returns ALLOW / REVIEW / BLOCK, and records evidence before any future settlement adapter executes.

x402-STYLE API INTENT

ALLOW

REVIEW

BLOCK

No wallet. No signing. No broadcast. No USDC movement.

Agents outpace payment review

THE REQUEST

An agent can propose a recipient, amount, purpose, route, authority, and fee context in seconds.

THE GAP

A payment rail does not retain why the request was allowed, reviewed, or blocked. That reasoning must exist before execution.

A trusted 0.08 USDC x402-style API intent

The envelope shows per-request limit, daily spend, remaining budget, projected spend, velocity, matched rules, reason codes, and append-only audit evidence.

`AgentPay Receipt: fundsMoved: false`

One Guard, several proposal types

GENERIC USDC

Recipient, scenario, amount, daily limit, velocity, suspicious terms

CCTP PREVIEW

Local route, finality, wallet-control, fee, and total-budget policy

ERC-20 AUTHORITY

Proposed approve / transferFrom and deterministic spender policy

PAYMASTER PREVIEW

Local USDC fee and wallet-control policy; no UserOperation

The x402 policy envelope in one minute

AGENT PAYMENT INTENT

trusted-x402-api.demo · 0.08 USDC

ALLOW

Recipient is allowlisted, amount is below limits, and scenario is allowed.

PER-REQUEST LIMIT 10.00 USDC	DAILY SPEND 0 / 25.00 USDC	DAILY REMAINING 25 USDC
PROJECTED DAILY SPEND 0.08 USDC	VELOCITY WINDOW 0 / 5 in 60s	AUDIT TRACE audit_20260801_000001

MATCHED RULES
recipient_allowlisted, scenario_allowed, amount_below_per_payment_limit

REASON CODES
RAIL_PREVIEW_ONLY, RECIPIENT_TRUSTED, PURPOSE_ALLOWED, AMOUNT_WITHIN_LIMIT

AgentPay Receipt created
append-only JSONL evidence · fundsMoved: false

Future settlement adapter
Arc Testnet local simulation: broadcast false, not executed

View receipt

WHAT THE JUDGE SEES

Trusted API intent
ALLOW / REVIEW / BLOCK
Spend controls
Matched rules + audit trace
Receipt + future adapter
boundary

fundsMoved: false

broadcast: false

Evidence now; execution remains separate

IMPLEMENTED

- Deterministic policy
- Decimal-safe controls
- Append-only JSONL
- Idempotent replay
- AgentPay Receipt

NOT EXECUTED

- No wallet or private keys
- No signing or custody
- No live Arc / Circle / x402 call
- No RPC or transaction
- No settlement or finality claim

Keep every adapter behind the evidence contract

VERIFICATION

Deterministic tests
Lint and typecheck
Production build
Local API smoke

Append-only JSONL + idempotency

NEXT MANUAL ACTIONS

Review the integration PR.
Redeploy the public demo from merged main. Review or re-record the public video for the x402-first click path.
