

PROGRAMMABLE MONEY HACKATHON

AgentPay Guard

The payment firewall for autonomous AI agents

PROPOSED USDC PAYMENT INTENT

ALLOW

REVIEW

BLOCK

Deterministic policy. Explainable evidence. Human-confirmed boundaries.

Autonomous payment intent is faster than human review

AN AGENT CAN FORM A REQUEST

before an operator can assess whether the recipient, purpose, amount, route, authority, and fee context are acceptable.

A PAYMENT RAIL ALONE DOES NOT

preserve the policy reasoning behind the decision. AgentPay Guard creates that missing evidence boundary before settlement.

`intent → policy → evidence`

A hard policy boundary before settlement

ALLOW

REVIEW

BLOCK

Every outcome carries matched rules, risk context, an audit ID, and an AgentPay Receipt.

One boundary, multiple payment proposals

GENERIC USDC

Recipient · scenario · amount
Daily limit · velocity
Suspicious keywords

CCTP ROUTE PREVIEW

Ethereum → Base
Fast Transfer · wallet control
Estimated fee · decimal-safe
totals

ERC-20 AUTHORITY

approve / transferFrom
Spender policy
USDC base units

PAYMASTER PREVIEW

Local USDC fee budget
No UserOperation
No gas execution

All protocol-facing values remain proposal-only evidence in the current MVP.

Make the decision and evidence legible

Selected sources

Proposed spend: 0.24 USDC

Allowed spend: 0.08 USDC

OPERATOR PATH

CitePay request
→ proposed USDC intent
→ Guard preflight
→ matched rules
→ AgentPay Receipt

`fundsMoved: false`

No wallet. No signing. No live settlement.

Proof now, execution later

IMPLEMENTED NOW

- Deterministic local policy engine
- Append-only JSONL audit trail
- Idempotent replay by intent key
- AgentPay Receipt evidence
- Production build and public demo

EXPLICITLY NOT EXECUTED

- No wallet connection
- No private keys or signing
- No live funds movement
- No live Arc / Circle / CCTP / x402 calls
- No settlement or finality claim

A controlled path from evidence to settlement

VALIDATED

142 passing tests

10 test files

lint · typecheck · build

systemd production service

ROADMAP

Put Arc / Circle Gateway / x402 adapters behind the same policy boundary only after the evidence contract is proven.
